Functional principle

Ultrasonic sensors capture a multitude of objects contactlessly and wear-free with ultrasonic waves. It does not matter whether the object is transparent or opaque, metallic or non-metallic, firm, liquid or powdery. Even environmental conditions such as spray, dust or rain hardly affect their function. The sonic cone diagram indicates the detection range of the sensor. In accordance with standard EN 60947-5-7, quadratic targets in a range of sizes (20 × 20 mm, 100 × 100 mm) and a round rod with a diameter of 27 mm are used. Important: The detection ranges for other targets may differ from those for standard targets due to the different reflection properties and geometries.

Mounting instructions

Mounting instructions/Description

Setting the limits
The ultrasonic sensor has an analog and a switching output with teachable measuring and switching range. Teaching is possible via Easy-Teach adapter or with the buttons at the sensor. The green and yellow LED indicate whether the sensor has detected an object. Various functions such as single switchpoint, window mode or reflection mode to a fixed target can be taught. Further information is described in the operating instructions. How to set the window mode is described below. The

limits of the window may be selected freely within the detection range.

- Easy-Teach
- Connect teach adapter TX1-Q20L60 between sensor and connection cable
 - For the first limit value, place object accordingly
 - Press and hold the select button for output 1 or 2 for 2 or 8 s against Gnd
 - Press and hold the select button for 8 s against Gnd to teach the first limit value.
 - For the second limit value, place object accordingly
 - Press and hold button for at least 2 s against Gnd

- Teach-Button
- For the first limit value, place object accordingly
 - Press and hold button 1 to select output 1 or 2 for 2 or 8 s against Gnd
 - Press and hold button 1 for at least 8 s
 - For the second limit value, place object accordingly
 - Press and hold button 1 for at least 2 s

LED response

Successful teaching is indicated by a fast flashing green LED. Thereafter, the sensor automatically runs in normal operating mode. Unsuccessful teaching is indicated by the LED flashing alternately green and yellow.

In normal operating mode both LEDs signal the switching state of output 1.

- green: object is in the detection range but not in the switching range
- yellow: object is in the switching range
- off: object is outside the detection range or signal loss
