Wiring diagram

Functional principle

Retro-reflective sensors incorporate emitter and receiver in a single compact housing. The light beam of the emitter is directed towards a reflector which returns the light back to the receiver. An object is detected when it interrupts this beam. Retro-reflective sensors have a high function gain and good contrast performance. Further it is merely required to install and wire a single device.

Dimension drawing	Type	ID	
Technical drawing of a round reflector (BRT-3). The drawing includes a front view (left) and a side view (right). The front view shows a circular reflector with a central mounting hole. Dimensions are given as nominal values in brackets: Ø 5.2 [0.21] for the central hole, 7 [0.28] for the thickness of the central part, and Ø 81 [3.19] for the outer diameter. The side view shows the profile of the reflector, which is a thin, circular disk.	BRT-3	3016164	Round reflector, reflection coefficient 1.0, material acrylic, ambient temperature -20...+60 °C
