

Pick-to-Light Placement Sensor Retroreflective Sensor with Polarizing Filter K50ANLPGXD

Туре	K50ANLPGXD	
ID	3076287	
Signal and display data		
Purpose	Pick-to-Light	
Function	Retroreflective Sensor	
Max. range	2000 mm	
Light type	Red	
Number of beams	1	
Switch Function	Momentary	
Features of color 1	Green, Permanently on	
Special features	Wash down	
Electrical data		
Operating voltage U _B	1230 VDC	
DC rated operating current I _e	≤ 150 mA	
Max. current consumption per color	75 mA	
Output function	NO contact, NPN	
Input type	minus-schaltend	
Response time typical	< 3 ms	
Mechanical data		
Design	Dome, K50	
Dimensions	Ø 50 x 56.8 mm	
Housing material	Plastic, PC, Black	
Window material	Polycarbonate, diffuse	
Electrical connection	Cable, 2 m, PVC	
Number of cores	4	
Ambient temperature	-40+50 °C	
Relative humidity	090%	
Protection class	IP67	
	IP69	
Tests/approvals		
MTTF	146 years acc. to SN 29500 (Ed. 99) 40 °C	
Approvals	CE, cULus listed	

- Protection class IP67
- Cable 2 m
- Job light: green
- Mispick: not signalled
- Actuation: not signalled
- Operating voltage 12...30 VDC
- NPN switching
- NO contact

Wiring Diagram

Functional principle

The K50 pick-and-place sensor is suitable for many mounting and component placement applications. The green work light or other signal lights are reflected perfectly by the entire dome (depending on the version). The transistor output can be easily connected to a system control, which is programmed for a special task sequence. The work light of the sensor is located in or next to every bin at the operator's workstation and indicates: 1. The bins with the components to be picked up for a particular work step and 2. the sequence in which the components have to be picked up. If the operator removes a part from the bin, the K50 detects the hand in the bin and sends a signal to the control unit. The system then checks if the correct component has been picked up and - depending on the configuration - switches the corresponding work light off and the next one on, according to the assembly sequence. The work sequence control leads to increased efficiency, improved quality control and reduces rework and testing ex-

The term **work light** therefore refers to the visual indicator of the bin from which a part should be removed next. The **actuation indicator** confirms the removal with a different color. The **mispick indicator** illuminates if a bin was reached into when the work light was not set.

Accessories

Type code	Ident no.		Dimension drawing
SMB30A	3032723	Mounting bracket, rectangular, stainless steel, for sensors with 30mm thread	o 30.5 6.3 wide o 6.3 7.5 R 40 69
