| Function                     | Opposed mode sensor                       |
| Operating mode               | Receiver                                  |
| Wavelength                   | 660 nm                                    |
| Range                        | 05000 mm                                  |
| Electrical data              |   |
| Operating voltage            | 1030 VDC                                  |
| Residual ripple              | < 10 % U <sub>ss</sub>                    |
| DC rated operational current | ≤ 100 mA                                  |
| No-load current              | ≤ 20 mA                                   |
| Short-circuit protection     | yes                                       |
| Reverse polarity protection  | yes                                       |
| Output function              | Complementary contact, NPN                |
| Switching frequency          | ≤ 500 Hz                                  |
| Readiness delay              | ≤ 100 ms                                  |
| Response time typical        | < 0.625 ms                                |
| Setting option               | Potentiometer                             |
| Mechanical data              |   |
| Design                       | Tube, M12                                 |
| Dimensions                   | Ø 12 x 67.5 mm                            |
| Housing material             | Metal, Nickel-plated brass, Nickel Plated |
| Lens                         | plastic, PMMA                             |
| Electrical connection        | Cable, 2 m, PVC                           |
| Number of cores              | 4   |

#### **Features**

- Cable, PVC, 2 m, 4-wire
- Protection classes IP67 / IP68
- Metal housing
- ■LED all-round visible
- ■Indication of insufficient excess gain
- Sensitivity adjustable via potentiometer
- Operating voltage: 10...30 VDC
- ■NPN switching output, changeover

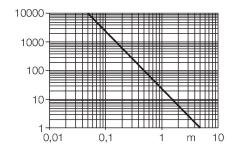

#### Wiring diagram

## Functional principle

Opposed mode sensors consist of an emitter and receiver. They are installed opposite each other so that the light from the emitter is aimed directly at the receiver. When an object interrupts or weakens the light beam, the sensor switches. Opposed mode sensors are the most reliable photoelectric sensors for detection of opaque targets. An excellent contrast between light and dark conditions and an extremly high excess gain are typical of this sensing mode, thus allowing operation over larger distances and under difficult conditions.

#### **Excess Gain Curve**

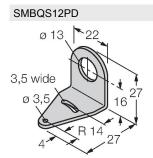

## Technical data

| Core cross-section                    | 0.35 mm <sup>2</sup>                     |  |  |
