Wiring Diagram

Functional principle

The safety light curtain consists of an emitter and a receiver. As the system is optically synchronized, no wiring between the emitter and receiver is required. The safety switching outputs of the receiver are directly connected to a load relay and trigger an immediate stop of dangerous machine cycles. Due to the 2-channel design of the switching device, the requirements of personnel safety type 2 acc. to IEC 61496 and category 2 acc. to EN 954-1 are fulfilled.
